

ABSTRACT OF THE DISCLOSURE

5 A computer monitor receiver for monitoring children's
internet usage. The computer monitor receiver includes a video tap
assembly operationally coupled between a video output and a video
display device of an information handling system for routing a
monitoring video signal, a signal transmission assembly for
10 conditioning the monitoring video signal for transmission through a
propagation channel, a receiver assembly for conditioning a signal
received through the propagation channel and a video presentation
device for displaying a real time substantially identical image of
the video provided to a user being monitored.
